

Welcome to your new **Jelly-go** device!

Please view the short Instructional Video online at www.jelly-go.com as an introduction. The key steps together with useful tips are on the next page.

Important! Please note that the **Fill Lid** is first firmly fitted to the “Top” of the **Content Cylinder** (see below graphic). The **Content Cylinder** is then inverted to receive the liquid gelatine mix.

In your Jelly-Go pack, you will have received the following five different types of components:

Jelly-go preparation

1. Prepare your liquid gelatine mix in the usual way. This should result in the equivalent of 16 fluid ounces (2 cups, or 500ml) of liquid mix.
2. **Firmly attach the Fill Lids to the “Tops” of the Content Cylinders.** The Top is the side without the “Guide” Double Dots.

3. Pour equal amounts of the mix into the Content Cylinders. Do not over-fill. Leave at least one inch of clearance.
We recommend slightly more clearance for younger children as shown:

4. Place the tray in the refrigerator for the recommended time (usually three or four hours) so the mix can “set”.

5. To insert a Plunger down into a Content Cylinder, align the “Guide” Double Dots at the top of the Plunger with those on the bottom of the Content Cylinder. **Insert until the threads connect before you start twisting.**

6. Then twist in the Plunger in the direction of the threads, until the Plunger just begins to push against the set gelatine mix. Almost there!

7. Turn your Jelly-Go the right way up and remove the Fill Lid. Then screw on the Mouthpiece and it's ready to go. **Please supervise children until they are naturally twisting the plunger in clockwise!**

8. A Mouthpiece Cap is also provided to protect the Mouthpiece. Enjoy!
